

# STANDARDS DEVELOPMENT

An efficient firm works from a solid set of BIM and CAD standards. But getting your design software to align with your standards can often be a challenge.

The experts at CADD Microsystems have worked across the industry helping to align corporate standards to the functionalities in Revit, AutoCAD, and Civil 3D.

## FROM THE GROUND UP

We can help design, manage, and implement a complete creation, update, or overhaul of your standards to help your team run as smoothly as possible.

## FILLING IN THE GAPS

We can assess your current standards and processes and make recommendations to fix any oversights.

## TECHNICAL OR OTHERWISE

A robust set of standards includes not only updates and content created for software, but process refinement, training, and documentation. Our consultants are not just software experts, most come straight from working in the design industry, so they know how to “talk the talk” and help design a complete set of items needed for successful standards.

## SERVICES INCLUDE:

- AutoCAD, Revit and Civil 3D
- Custom configuration files
- Custom content for AutoCAD or Revit
- Profiles and INI files to support your software
- Documentation for your BIM and CAD manuals
- Network standards and recommendations
- Workflow and process refinement assistance

Let us help your team get your standards in order.
